### **The ocean is a vital part of our planet.**

It covers 71% of the Earth's surface and contains 97% of the planet's water. The ocean provides food, oxygen, and livelihoods for billions of people. It also regulates the Earth's climate and absorbs carbon dioxide from the atmosphere.

### **Climate change is a serious threat to the ocean.**

As the Earth's atmosphere warms, the ocean absorbs more heat. This is causing the ocean to expand and become more acidic. It is also leading to more extreme weather events, such as hurricanes and floods.

These changes are having a devastating impact on the ocean's ecosystems. Coral reefs are bleaching and dying. Fish populations are

declining. And sea levels are rising, threatening coastal communities.

## **We need to act now to save our ocean.**

We can reduce greenhouse gas emissions by transitioning to renewable energy sources and improving energy efficiency. We can also protect and restore coastal habitats, such as mangroves and salt marshes. And we can reduce our consumption of seafood, especially from overfished species.

Saving our ocean is not just about protecting the environment. It is about protecting our own future. The ocean is essential for our survival, and we cannot afford to lose it.

## **Here are some things you can do to help save our ocean:**

\* Reduce your carbon footprint by driving less, eating less meat, and using less energy at home. \* Support organizations that are working to protect the ocean, such as the Ocean Conservancy and the World Wildlife Fund. \* Get involved in local cleanup efforts and beach restoration projects. \* Spread the word about the importance of saving our ocean.

Together, we can make a difference. Let's work together to save our ocean and ourselves.
